

Restoring Vision Through Advanced Manual Therapy

Patient: Mr. Shouren Sen Gupta

Condition: Vision Loss Due to Toxic Alcohol Consumption

Treated By: Dr. Bala Kumaran | Orthopaedic Manual Therapy Expert

Background

Mr. Shouren Sen Gupta was admitted to Krishna Health Centre following sudden and severe vision loss. The onset occurred after the consumption of a local alcohol preparation known as “Patta Sarayam”. The toxicity of this substance led to a rapid deterioration in his visual capabilities.

Problem

Multiple medical experts had evaluated Mr. Shouren's condition and concluded that there was no viable treatment or recovery option available for his vision. The case was considered irreversible, and Mr. Shouren was left with little hope for recovery.

Intervention

Despite the complexity of the case, Dr. Bala Kumaran, fondly known as our "Dr. B" doctor for his commitment to tackling challenging cases decided to take it up. Using advanced orthopaedic manual therapy, he focused on restoring the neural and biomechanical pathways associated with vision, without the use of drugs or surgery.

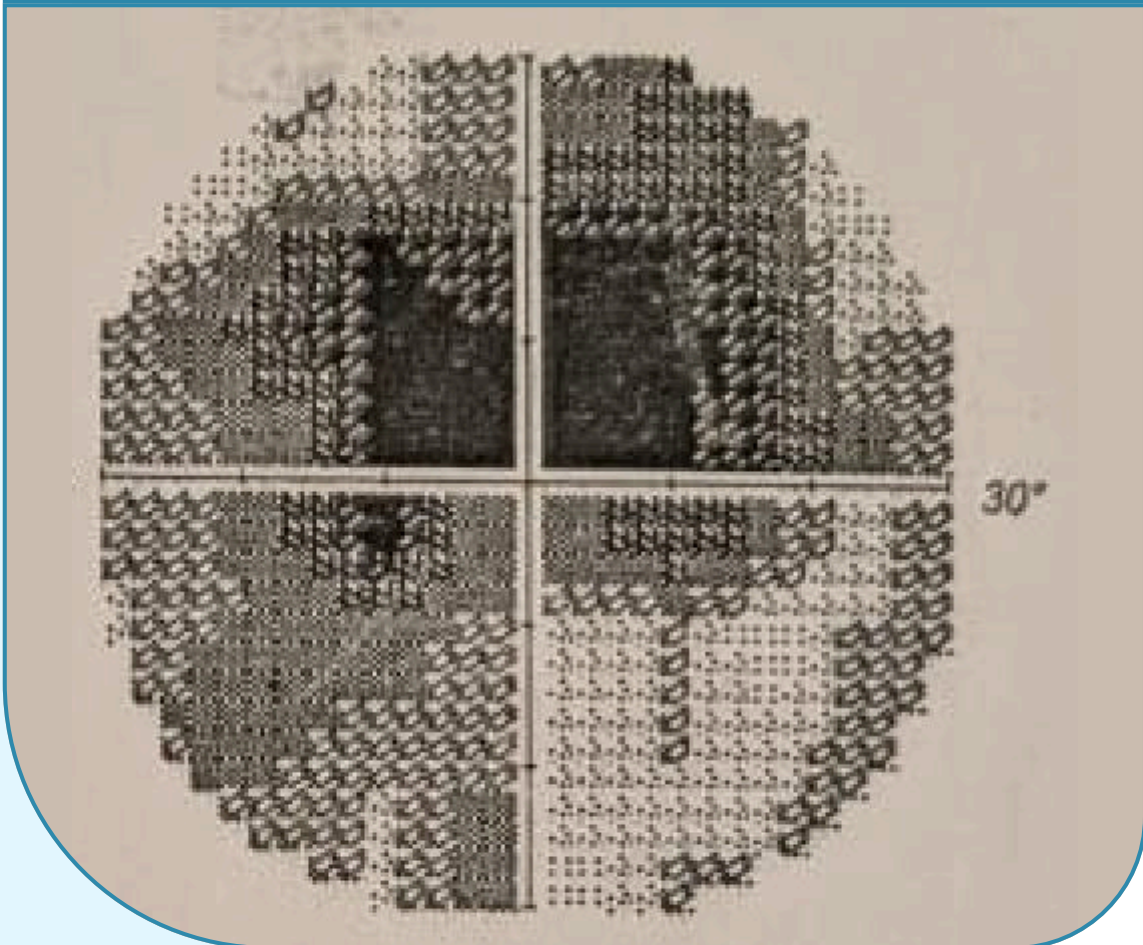

Outcome

Remarkably, Mr. Shouren began to experience significant improvements after undergoing the therapy. Over time, his vision was fully restored, without the use of medications or surgical intervention. He has since returned to living a full and joyful life and is now happily married.

Conclusion

This case demonstrates the effectiveness of advanced manual therapy in addressing even rare and critical conditions like vision loss. Mr. Shouren’s story stands as a powerful example of hope and healing beyond traditional medicine
